

Possible object (1/3)

Date

2015

Primary Maker

Fahey, Kate

Medium

Cast aluminium

Description

Possible Object began with a low-resolution image of the surface the ocean released in the media in the days following the disappearance of Malaysian Airlines flight MH370. A digital heightfield map was generated in 3D from the image using the grey scale to create surface levels. This surface was then CNC milled in blue foam and cast in aluminium. The aluminium cooled quickly during the foundry pour, creating material glitches in the surface, manifested as 3 small holes. These glitches disrupt the surface, gesturing towards the, unmappable and the

unknowable in the digitally surveilled age.

Dimensions

Object: 58 × 85 × 1.5 cm
